

Software Engineer

ABOUT ME

A dedicated Software Engineer with experience in fintech, backend development, infrastructure management, and some entrepreneurship. My career progression reflects the feedback by the managers and mentors I had and commitment to learning. Outside of work, I maintain an active lifestyle through regular gym sessions, Brazilian Jiu-Jitsu, playing football, and supporting my family, which reinforces my disciplined approach to continuous improvement. Having recently ventured into entrepreneurship, I learned how much there still is to improve.

Software Engineer, Alternative Payment Methods

CHECKOUT LTD

Relocated from London to São Paulo to help bootstrap Checkout's first Brazil-based engineering team, carrying over the London engineering culture and ways of working. Delivered core Pix building blocks, including payment, reversal and deposit clients against a banking-as-a-service provider. Led the end-to-end delivery of a new stablecoin (crypto) payment method, covering discovery, integration, infrastructure and go-live preparation, ahead of schedule. Engineered a non-standard recovery that saved roughly C422k, delivering zero self-inflicted high-severity incidents and no production downtime, backed by root-cause analyses and per-merchant anomaly monitors. Drove team-wide AI adoption by introducing a shared plugin marketplace and knowledgebase, experimenting with multi-agent orchestration, and training a tiny LLM on the codebase using Roslyn-based code extraction.

07/2025 - 09/2025
London, UK

Software Engineer (Contractor), Client Balances

CHECKOUT LTD

Returned to Checkout as a contractor to help design the company's first system for managing receivables in Brazil, a regulatory prerequisite for enabling debit and credit card processing in the country. Contributed to the discovery of installments support for the Brazilian market. Designed and delivered reconciliation of receivables data, sourced from Google BigQuery, against internal records. Built the merchant registration flow required to register merchants with Brazil's receivables registry ahead of processing, integrating with an internal case management tool. Automated bureaucratic processes and scheduling to comply with complex Brazilian regulatory requirements. Set up operational monitoring and Service Level Objectives for the new Brazil services. Provisioned infrastructure and built systems for the new Brazil services, including the safe handling of PII data.
C# / AWS / DynamoDB / BigQuery / System Design / CI/CD

London, UK

Founder & Software Engineer

OPENSIRT LTD

Left Checkout to pursue entrepreneurship and experimented with React, C# .NET Blazor, ASP.NET Razor Pages and HTMX before settling on TypeScript + React + Vite + Shadcn for front-end, C# ASP.NET g Minimal APIs for back-end and .NET Aspire for local development. Built the infrastructure with Terraform on AWS, where backend is hosted on ECS and exposed to the internet through a Cloudflare Tunnel and frontend is hosted on a S3 bucket behind CloudFront. Implemented CQRS with Event Sourcing where events are persisted in DynamoDB and projections in SQLite with Entity Framework and Litestream backups. Integrated ImageMagick for server-side image manipulation (example: background removal). Generated HTTP clients (vendor APIs and frontend) with Kiota based on OpenAPI specification. Engaged two freelancers (marketing and design) to support go-to-market efforts. Integrated with Stripe for payment processing, MailKit for mailing and OpenTelemetry. Despite solid technical foundation, was unable to secure sufficient sales to scale the business.
C# / ASP.NET / CQRS / Event Sourcing / OTEL / Entity Framework / Docker / Terraform / AWS / TypeScript / React / Entrepreneurship

05/2020 - 12/2023 London, UK	Software Engineer, Merchant Experience Migrated legacy services from .NET Core 3 to .NET 6 and refactored monoliths into microservices. Maintained and enhanced the merchant onboarding tool and merchant application form; successfully automated compliance checks reducing human involvement and faster activation. Replaced TeamCity/Cake with GitHub Actions, to lower costs and react faster to code changes. Migrated internal configuration API to high standard infrastructure without downtime. Migration 15 services to new Octopus deployment instance ahead of schedule. Designed and delivered Terraform infrastructure for critical services orchestrated by Spacelift, becoming the primary infrastructure point of contact for the team. Authored cross-team components such as a generic Audit Logger (based on Elasticsearch + C# NuGet package) and a AWS Secrets Manager Rotator (Terraform + Python). Wrote and maintained BDD tests using SpecFlow to ensure behavior-aligned development. Contributed to minor frontend features using React and TypeScript. Delivered multiple technical presentations at company-wide internal tech forums. Pioneered the first end-to-end HTTPS-only service within the Merchant Experience department. Established JSON Schema-based API standardisation to eliminate frontend/backend contract discrepancies, including the development of an algorithm to convert internal requirements API responses into JSON Schema without modifying upstream APIs. Introduced GitHub Packages for NuGet and NPM, including company-wide documentation and adoption guides with corresponding GitHub Workflows. Introduced ARM Fargate usage for cost efficiency, earning direct praise from company leadership. Recognised by management for outperforming expectations of his role, delivering more than expected and demonstrating ownership across technical and product. C# / ASP.NET / Terraform / AWS / CI/CD / Docker / Elasticsearch / NoSQL	CHECKOUT LTD
10/2018 - 05/2020 London, UK	Software Engineer, Ecommerce Platforms Designed and launched the open-source Checkout PHP SDK from the ground up, integrating 22+ global payment methods; became forever <u>top contributor</u> to the project. Built and maintained payment plugins for WooCommerce, Magento, OpenCart, Drupal Commerce, PrestaShop, Shopware, and Ubercart enabling seamless payment gateway integration. Independently built a TypeScript-based middleware MVP in personal to bridge ecommerce platforms with Checkout's payment gateway; presented the concept to directors that resulted in the creation of a dedicated team and processed about \$90 million in its first year. Architected and maintained AWS infrastructure (Lambda, API Gateway, DynamoDB, S3, CloudFront, CloudWatch, Secrets Manager); introduced Terraform and led team-wide IaC adoption. Implemented robust authentication flows (API Key, OAuth, JWT) and idempotency handling. Enabled Checkout's integration with headless ecommerce platforms, enterprise partners like Uber and new products like Checkout Hosted Payment Pages. PHP / TypeScript / AWS / Terraform / Shopping Carts / CI/CD / NoSQL	CHECKOUT LTD
03/2016 - 10/2018 London, UK	Developer Developed and maintained a high-performance API supporting real-time data services for customer behavior analytics across large-scale digital platforms. Implemented caching strategies, including cache versioning, to ensure fast data retrieval and optimised system performance. Integrated backend services on a responsive Single Page Application (SPA) built using TypeScript, Backbone.js, Marionette, and RequireJS. Delivered a robust API that served as the backbone for Decibel Insight's visual analytics platform, powering real-time insights into on-site customer behavior. Helped implement core systems behind a proprietary customer experience analytics product recognised with the Adobe Marketing Cloud Innovation Award (2015). PHP / SQL / TypeScript / Backbone.js / Marionette.js / RequireJS	DECIBEL INSIGHT LIMITED
09/2014 - 10/2015 Lisbon, PT	Full Stack Developer Developed backend systems in PHP, with MySQL as the primary database. Created interactive front-end components using jQuery for an intuitive user experience. Participated in the full software development lifecycle—from architecture to deployment. Successfully delivered a remote printer management platform that enhanced customer autonomy and reduced support overhead. Gained practical experience in building enterprise tools for a niche but highly technical industry. PHP / SQL / JavaScript / jQuery	BELTRÃO COELHO LDA

06/2014 - 07/2014 Lisbon, PT	Web Developer, Internship Developed a Python-based web crawler to identify and analyse web government pages for compliance with Law No. 36/2011 (RNID - July 21, Portugal). Contributed to an open-source initiative promoting web accessibility and compliance with national standards. Python	CAIXA MÁGICA SOFTWARE S.A
06/2013 - 07/2013 Lisbon, PT	2nd Line Support, Internship Provided technical support for both hardware and software issues across Linux and Windows. Delivered remote support to Windows machines using Remote Desktop Protocol (RDP). Gained hands-on experience in enterprise-level IT support and work ethics. Linux / Windows / Hardware	TAP AIR PORTUGAL S.A

EDUCATION

2017 - 2020 London, UK	Computing	Birkbeck, University of London
2016 - 2017 London, UK	Electrical and Electronic Engineering	London South Bank University
2011 - 2014 Lisbon, PT	Computer Specialist Level 5 Professional Certificate. Web development, Visual Basic .NET and Robotics.	Escola Sec. António Damásio
